All prices are subject to the applicable statutory VAT.

[1] Electricity prices are traded daily on the exchanges and are volatile, much like fuel prices. The consumption-based electricity prices and time-based charges stated are the prices currently applicable in Great Britain, which are not fixed for the duration of the contract. The price components for electricity and time-based charges apply on an individual contract basis for each charging session. Under the Flex tariff, consumption-based electricity prices and any time-based charges vary depending on the charging station. The applicable electricity prices and time-based charges can be viewed in the Charge&Fuel app before each charging session.

[2] No minimum contract term; one month's notice required to terminate the contract at the end of the month.
